

## What we do

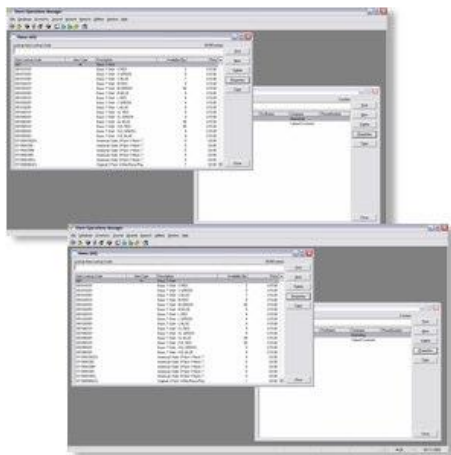

For retail organisations looking to run operations more efficiently, improve service levels, and make the confident decisions that fuel growth, our range of EPoS, E-Commerce and Stock Management solutions gives you the freedom to run an efficient, customer focused business.

Our powerful software packages are ideal for small and mid sized retailers.

They automate point of sale processes and store operations, provide centralised control for multi-store retailers, and works like and with the Microsoft Office (r) system programs you already know and use.

Just as important, our solutions are built on a proven Microsoft platform that adapts to meet unique and changing retail needs and integrates readily with other business management solutions.

We are a total solution provider and as such, are able to supply a complete end to end solution to meet the needs of small and mid-sized retailers.

Our range of Microsoft based software products can be supplied with training and installation services, the highest quality hardware platforms and comprehensive after-care service.
